

# Tack-Free Thermosetting Adhesive Tapes

Alamotape® Tack-Free Thermosetting Adhesive Tapes are cured with high heat and pressure, resulting in extensive cross-linking between polymer chains to produce an infusible and insoluble polymer network. The curing process creates a chemical bond that, unlike a thermoplastic, prevents the material from reflowing. These adhesives are tack-free at room temperature; no release liner is needed.

## FEATURE APPLICATIONS

- Electrical & thermal insulation
- Busbar assembly
- Industrial appliance manufacturing
- Bonding to printed circuit boards
- Insulation for aircraft
- Wiring components & harness assembly
- Automotive
- Bonding rigid fittings to flexible tubing
- Electronic Manufacturing
- Electrical Manufacturing
